

# Understanding Neglect

## Background

Neglect is the persistent failure to meet a child's basic physical and/or psychological needs, likely to result in the serious impairment of the child's health or development. Neglect can, however, be difficult to identify and quantify. This training aims to support practitioners in identifying a child's needs through examination of their lived experience and circumstances and through assessing motivation to change.

## Learning Outcomes

By the end of the training, participants will have:

- A refreshed understanding of neglect and its impact on children and young people
- An understanding of how to identify and support decision making on cases relating to neglect
- Discussed practical implications and how to overcome barriers in relation to identifying neglect
